

## Do We Operate Packaging and Assembly Machinery? You Bet!

A common misconception about packaging companies employing people with disabilities is they only do simple hand work. Here at Lafayette that couldn't be further from the truth! With every job containing simple tasks there are often a myriad of complex machine tasks also involved. A simple hand assembly of a three part hardware unit may be followed by **bagging which requires heat sealing, and a Lafayette machine operator.**

bag sealing

shrink wrapping

Customers may need custom hand labeling of a new retail barcode onto a carton which is then combined with a free trial bottle, then run through **shrink wrapping equipment operated by a Lafayette employee.**

## Running your equipment line is right up our alley...

A job that is in your way, taking up space and employees, might be the perfect match for our space and employees. Lafayette has taken over several packaging lines for our customers, moving their customized tooling and equipment into our shop to be run by our employees with disabilities. We can provide common equipment to round out the line such as conveyors, tapers, and more. Lafayette has a maintenance team that makes sure your equipment is kept in good running condition. Our supervisory staff will train employees on the equipment operation. Lafayette employees with disabilities run fillers, presses, shrink wrap, and more.
